

ENCRYPTION WIZARD

By AFA4II

What is Encryption Wizard Archive? What does it do? How do I use it?

Archive is a very useful tool whether you use it to send encrypted files/folders
 Or to encrypt files on your hard drive or flash drive.
 Archive can take 2,3,4 or 100 individual files, a complete folder or flash drive and convert them into one encrypted .WZA archive file.

Start by dragging and dropping 2 or more files or as in the case of this tutorial A complete folder into EWizard

Next you have to name your archive & choose a location to save it, If no location is selected the file will be saved to the desk top. Put a check in compress, Then click NEXT Compress
In you do not specify a full path for your archive, it will be created on your desktop.

Cancel

Next >>

You will see all of the files that are in the folder, but not the folder itself select all the files By right clicking, then "select unencrypted". Then click Archive

Add the passphrase for your archive & click ADD. FIG 1 Then click NEXT

And saved in chosen location. NOTICE that it is not a .WZD file BUT a .WZA file and a WZA file cannot be DECRYPTED, It has to be EXPANDED

Your archive is created

FIG 3

HOW TO OPEN A .WZA ARCHIVE FILE

To open an archive file you click EXPAND

Browse to the directory where you want your expanded files/folder. Then click NEXT
